

tended interface(*) gives the power user the full flexibility to create templates and reports for any type of SQL data and present it in many ways. It consists of tables, text boxes, 50+ charts, 20+ gauges and several other objects.

Powerful Historical Data Access

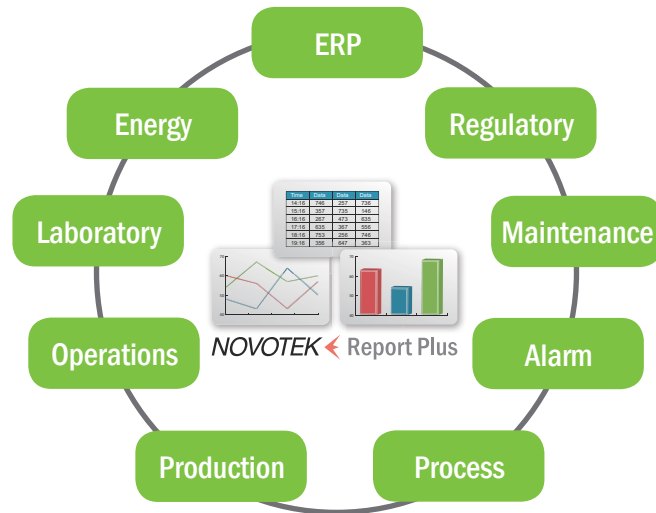

Historical data is fetched via an extended interface from the industry leading Proficy Historian. All raw data is stored to provide future compliance to regulatory requirements. NRP adds a number of calculation modes to the Proficy Historian interface to optimize the report creation. Counter handling is for example added to automatically handle counter resets and counter turn-around.

Generic database reporting(*)

The generic design of the product leverages reporting capabilities towards any SQL enabled database which enables integration of production data, lab systems, ERP systems, maintenance systems etc.

Intelligent time handling

One of the key functions of a reporting solution is the time handling. By letting the users define named times, report generation is more easy to handle. NRP also gives the user the ability to separately select the reporting period and sample interval. The product has full support for Daylight Savings Time.

NRP assists in integration and generation of all reporting demands in the production and process environment

Low cost of maintenance

The core web based solution gives low cost of ownership. The web solution also eliminates the need for maintaining local report definitions and therefore report validation is simplified. Since NRP is focusing on industry standards, ease of use, templates and wizards, the need for extensive training is eliminated.

National Language Support (NLS)

The system has support for Danish, English, Norwegian and Swedish languages both in the reporting client and the basic administrator.

Powerful Integration

NRP can easily be integrated into different systems providing a common base for all production and process reporting throughout the organization. The native web

handling makes it possible to integrate to SCADA, Portal and Intranet applications. The open SQL interface for the Proficy Historian extension makes it possible to access all new calculation and aggregation modes from other applications like Excel.

With intelligent extensions of the Proficy Historian database and an easy to use reporting environment, NRP can fulfill the different needs for operations, management and regulatory reporting.

(*) Requires a valid license of SQL Server 2008
