

Pressrelease March 2006

Proficy Real-time Information Portal 2.6 released

Real-time Information Portal v2.6 is now available with a variety of new features. The latest release of our award winning Portal delivers a number of key updates and enhancements including iFIX integration, updated Plant Database Connector, updated web control, stacked bar chart analysis and a number of additional key features that will allow customers to get even more value out of both new and existing installations.

The new capabilities/enhancements in the Proficy Real-Time Information Portal v2.6 release are highlighted below:

Category Chart Improvements - New configuration options are now available for use with Category charts, including stacked bar charts, displaying bars as percentages, and showing summary lines in both bar and line charts.

iFIX v4.0 Interoperability Improvements - A new method for embedding Proficy Portal displays in iFIX pictures is now available. Also, running iFIX 4.0 or greater on the same machine as your Proficy Portal server is now supported.

Time Chart Export Options - A new format is available for exporting historical data from Time charts. When the data are viewed as a .CSV file, the tags appear in columns and the timestamp appears in rows.

Portlet Support - Proficy Portal displays can now be used in web portlets, which allows for the presentation of displays as static images. To further support this, you can now schedule the generation of displays as images.

OPC 2.0 Data Qualities Support - Users of Proficy Historian 3.1 can view data qualities information in Proficy Portal (in support of OPC 2.0 Data Qualities). New columns OPCQUALITYVALID, OPCQUALITY, and STEPVALUE are now available in the SQL Statement Builder.

Online Help Search Improvement - It is now easier to find information in the Help with the use of wildcards, operators, and quotation marks. The results of the search can be sorted by ranking or title, and the matches of your search are now highlighted in listed topics.
